

Coalescing Filters

Coalescing Filters

Wilkerson co-alescing filters are designed specifically for the removal of solid particles, water and oil aerosols down to 0.01 micron in size. The maximum remaining oil content of the air leaving the filter is 0.01ppm @ 70°F and (21°C) at 100 psi (6.9 BAR) using typical compressor lubricant.

Two separate filter elements grades are available to best meet your air quality needs.

Wilkerson co-alescing filters are available in 3 different series and a total of 4 separate pipe sizes to meet your specific air flow requirements.

This range M08, M18 and M28 co-alescing filters factor

- * standard bow l guard with view slots
- * barbed manual drain connection with pipe away
- * bayonet bowl mount for ease of service
- * high flow capacity in an efficient compact package.
