

# Filter Regulators

## Filter Regulators

Wilkerson integral filter/regulators combine both functions in a single, space saving, high performance unit.

It is a fact that more than 60% of all pneumatic equipment failures are caused by contamination of the compressed air supply. These filter/regulators effectively prevent this contamination for smooth, reliable, trouble free operation.

Included in the range is the new 08 Miniature series which features the same robust construction, fine tolerances and high flow characteristics of its larger cousins but in a compact design to allow even more options in system specification.
