

Moulded Plastic Valves

ST2-3

Moulded Plastic Solenoid Valves

Goyen manufactures three basic series of moulded plastic solenoid valves:

ST2

The ST2 series are normally closed, pilot operated diaphragm valves with typical applications on dish and glass washing machines, agricultural spraying equipment and vending machines.

LP4

The LP4 series are normally closed, direct lift solenoid valves with typical applications in vending machines.

AD4

The AD4 series are also a normally closed, direct lift solenoid valve, but a sealed diaphragm has been included to isolate the upper sections of the valve from the media being controlled. Typical applications are dispensing and vending equipment.
